

Design change to SAF INTRA steel hanger bracket series:

In the course of continuous product improvement here at SAF-HOLLAND, we will gradually be introducing an improved hanger bracket for the INTRA series from the 4th quarter of 2016. The new design has several advantages with regard to vehicle implementation and the alignment of the hanger brackets on the vehicle frame.

- **New:** 1) Marked area showing where to mount the cross member.
- **New:** 2) Marking of pivot bolt makes positioning easier.
- **New:** 3) Mounting of cross member is made easier by engraved SAF lettering

- Existing paintwork masking can continue to be used.
- Only homogeneous products can be mounted on the vehicle.
- The tightening torques of the spring bearings remain unchanged.
- Please note that there may be an effect on the integration of your cross members (We provide the relevant information).
